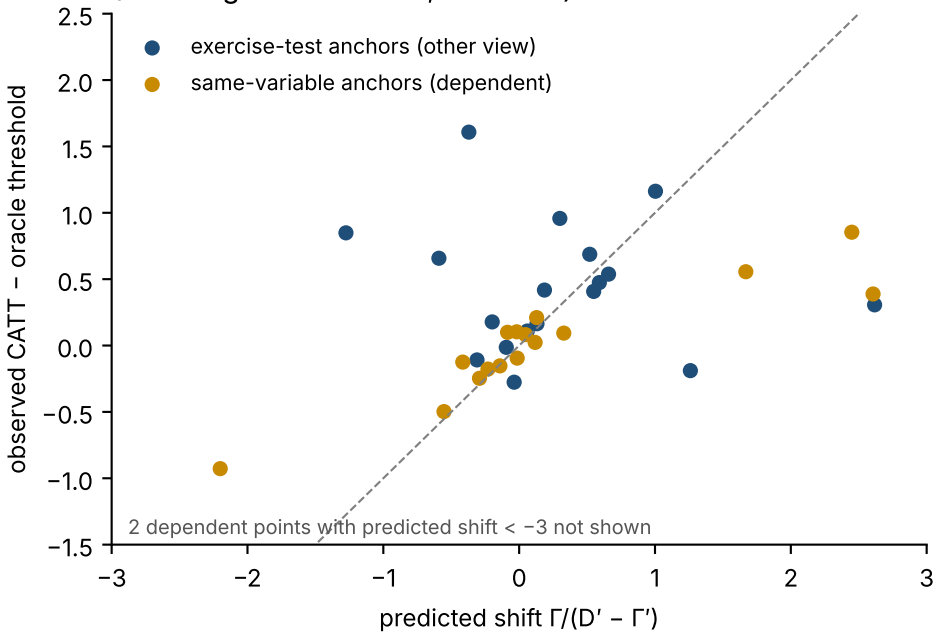
a n_eff law: matched labelled sample size
(lines: medians by n_eff; 1 = formula exact)
observed / predicted n_eff
predicted n_eff (labelled-equivalent sample size)
simulation (independent anchor)
Brugada cohorts (ECG)
UCI heart disease (3 hospitals)



b UCI heart disease: threshold shift
(9 settings × 4 anchors, 10 seeds)
exercise-test anchors (other view)
same-variable anchors (dependent)
observed CATT − oracle threshold
predicted shift Γ/(D′ − Γ′)
2 dependent points with predicted shift < −3 not shown
